## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, drawn to generating a received signal quality signal in dependence on a received signal quality of the transport channel format combination indicator, classified in class 455, subclass 522.
- II. Claims 21-28, drawn to generating a received signal quality signal in dependence on a received signal quality of the training sequence of a received burst, classified in class 455, subclass 522.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process such as generating a received signal quality signal in dependence on the bit error rate of the training sequence of a received burst or on the quality of the transport channel signal prior to channel decoding.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of the recognized divergent subject matter, restriction for examination purposes as indicated is proper.
